

At **Optimal Health USA** you will find that we are a natural health company who are passionate about helping our customers stay healthy or regain their health.

Our own family members and friends have regained their health from MRSA, Lyme, Morgellons and lesser health issues by combining hard work and the high quality food supplements that we provide to our customers.

The food supplement products that we provide have been researched extensively by our company and used successfully by ourselves and customers for many years.

Our company brings experience, integrity, a caring attitude toward helping others, and a high standard of customer satisfaction.

We provide ongoing health support with **Allimed** products at no extra charge.

If you have a question about our products or company please call us at

415-328-8356 M-F 9-5 PDT

Thank you for allowing us to help you stay healthy!

God bless,

Cathy Partridge, Allimed Consultant

Optimal Health USA - Where Healing Comes Naturally

Dr. Ronal Cutler, Infectious Disease specialist and Professor at the University of London.

Date of Antibiotic Introduction and Resistance

| Antibiotic | Discovered | Introduced Into Clinical Use | Resistance First Identified |
|------------------|------------|------------------------------|-----------------------------|
| Penicillin | 1929 | 1943 | 1940 |
| Streptomycin | 1944 | 1947 | 1947 |
| Tetracycline | 1948 | 1952 | 1956 |
| Vancomycin | 1956 | 1972 | 1987 |
| Garlic (allicin) | 1858 | -- | Never reported |

Adapted from Williamson JS, Wyandt CM, "Microbial resistance: the plague of tomorrow", Drug Topics, May 21, 2001 © B Sardi, 2006

Shortly after the discovery of Penicillin, bacteria became resistant to it.

Antibiotic abuse in our world has created super bacteria.

We now find ourselves in the era of multi-antibiotic resistant bacteria.

We must find ways to combat bacteria without encouraging resistance.

Allimed, Stabilized Allicin

Allimed is the result of a patented process which produces purified, living-source, completely stable allicin for the first time in history. Allicin is not garlic but the fully potent, active factor in concentrated form, never before available. It has broad spectrum, anti-infective properties coupled with strong, immune boosting and immune modulating capacity.

This makes stabilized allicin a highly significant antimicrobial

clinical agent, especially in today's world of widespread infections and with the creation

of new forms of multi drug resistant super bugs that have emerged due to the overuse of traditional antibiotics. For more research visit: <http://allimedresearch.blogspot.com/>
