

Susan is a Registered Nurse who has worked in quality improvement, education, surgery, medicine, dialysis, orthopedics, intensive care, community health, and oncology. She lives in the North Eastern United States. After a vacation in California in 1986 she returned home and became severely ill for 2 weeks and took about 6 months to recover. Afterward she struggled for years with strange symptoms that physicians tried to diagnose and was treated with a multitude of antibiotics and noninflammatory medications. After years of library and internet research she diagnosed herself with Morgellon's Disease and sought the help of Dr. Hildy. She has been a patient of Dr. Hildy's for more than 3 years now using Baci Mi products with great success. She purchased a lion a year ago and loves it!
